SUMMARY

Frontend / Full Stack Developer (MERN) with hands-on experience building, testing, and deploying scalable web applications using React.js, Node.js, Express, and Mongo DB. Delivered responsive user interfaces and secure authentication systems used by 100+ simulated users. Strong communicator with experience collaborating in agile teams, documenting APIs, and translating requirements into technical solutions. Proven ability to analyze performance issues and improve application speed, stability, and user experience.

EDUCATION

Visvesvaraya Technological University (VTU) **2022 – 2024**
Master of Computer Applications (MCA) *CGPA: 7.2/10*

CB Degree College, Bhalki **2019 – 2022**
B.Sc. in Computer Science *Percentage: 84%*

TECHNICAL SKILLS

Frontend: React.js, React Hooks, JavaScript (ES6+), HTML5, CSS3
Backend: Node.js, Express.js, REST APIs
Databases & Testing: MongoDB, MySQL, SQL Server
Design & Other Skills: Responsive Design, JWT Authentication, Basic Testing

Experience

Full Stack Developer Intern- Besant Technologies

- Led end-to-end development of a MERN-based food delivery platform (FoodExpress), delivering 20+ UI screens and backend features supporting 100+ simulated users.
- Collaborated with a 4-member development team to gather requirements, communicate progress, and deliver features across 3 Agile sprints.
- Designed and documented 15+ RESTful APIs and optimized database queries, reducing average backend re sponse time by 25%.
- Implemented JWT-based authentication and role-based access control, securing 100% of protected routes and improving session reliability.
- Refactored React components using Hooks and Axios, reducing unnecessary re-renders and improving frontend responsiveness by 20%.

PROJECTS

Hospital Management System |React, Node, MongoDB

- Developed a full-stack hospital management system supporting doctors, patients, and administrators across 3 user roles.
- Communicated system workflows and access rules, then implemented JWT-based authorization to eliminate unauthorized data access.
- Optimized frontend performance using React Hooks and Context API, reducing page load time by 15%.
- Modularized components and services, improving maintainability and reducing future development effort.

Weather Forecast App | React.js

- Built a real-time weather application consuming third-party APIs to display live data for 200+ city searches.
- Implemented auto-location detection and optimized API calls, reducing redundant requests by 30%.
- Designed a fully responsive, mobile-first UI ensuring consistent user experience across devices.
- Managed global state using React Hooks and Context API, enabling smooth UI updates and cleaner component logic.
